

Nuix Collector Suite

A fast and flexible set of tools for the identification, collection and preservation of potentially relevant digital evidence

take a closer look at

nuix

The Nuix Collector suite of products provides a powerful, easy to use and forensically sound solution for companies, law firms and litigation support professionals.

Nuix Collector Suite offers three tailored tools that can be used independently or as a complete solution:

Nuix Collector for SharePoint – provides a fast and defensible means of collecting ESI from Microsoft SharePoint sites, maintaining the exact look-and-feel as it existed at the time of collection.

Nuix Collector for Networks – automates the collection of ESI from laptops, desktops, enterprise file shares and common computer forensic file formats stored on a Windows accessible network.

Nuix Collector Portable – enables organizations to simply and rapidly collect data in the field. It is an easy 'plug and play' solution and the end user needs no expertise or specialist training.

Nuix Collector for SharePoint is unique in that it collects ALL types of page content (inc blogs, wikis, calendars, etc) and it maintains the exact look-and-feel as existed at the time of collection.

Simple. Powerful. Precise.

Nuix Collector Portable

Nuix Collector Portable is ideal for enabling organizations to collect data in the field.

Users pre-configure collection hard-drives or thumb drives to identify and selectively collect Electronically Stored Information (ESI) from laptops, desktops, and enterprise file shares. It is as easy as 'plug and play' and the end user needs no expert or specialist training.

Nuix Collector Portable can automatically search a targeted computer and collect data, including documents, Internet history and artifacts, images and other digital evidence. Items are identified, collected and preserved based on metadata searches – such as document owners, creation dates, modification dates and file types (for example, Excel, Word, PDF, open PSTs).

Key Benefits

- Creates a repeatable and defensible collection process using non-technical personnel
- Preserves all requested digital evidence
- Enables collection of data in remote locations without sending expert personnel
- Seamless integration and processing with Nuix Enterprise Discovery
- Ultra portable.

Nuix Collector for Networks

Nuix Collector for Networks enables organizations to perform targeted collections against vast pools of distributed data in an effort to meet their preservation obligations.

Nuix Collector for Networks scans a variety of sources to identify and gather potentially relevant Electronically Stored Information (ESI) – including from laptops, desktops, enterprise file shares, common computer forensics file formats and any other storage source on a network accessible in Windows.

It can identify, collect and preserve active files based on keyword searches and metadata – including owners, creation dates, modification dates and file types (for example, Excel, Word, PDF, open PSTs). In doing so, it creates forensically defensible copies of all selected items.

Key Benefits

- Creates forensically defensible copies of all selected items
- Enables high speed data sampling to rapidly survey any quantity of ESI
- Automates even the most complicated collections, with a programmable command line
- Chain of custody logging and fingerprinting of all collected content
- 'On-the-fly' de-duplication and de-NISTing with complete logging of duplicates and known files
- Can be used with **Nuix Collector Portable** to create the most efficient collections.

Nuix Collector for SharePoint

Nuix Collector for SharePoint supports the forensic collection of Microsoft SharePoint information, providing a fast and defensible means of collecting a MS SharePoint site whilst maintaining the exact look-and-feel as it existed at the time of collection.

Nuix Collector for SharePoint does not impact the SharePoint working environment during collection. Nuix collects the document libraries and maintains them as native copies, collects all metadata fields including custom and system metadata, and captures an exact MHTML representation of the page.

This approach ensures an exact replica of the site can be maintained, reviewed and produced – ensuring the collection matches the original.

Key Features & Benefits

- Collection from MS SharePoint (SP) 2007, MS SharePoint 2010 and MS SharePoint Services sites
- Simple point and click selection of sites, allows for a complete collection of the SP farm, or of individual sites
- Collects ALL page metadata, including time stamps, users, attributes, user defined metadata, etc.
- Extracts ALL types of page content, including Lists, Blogs, Calendars, Appointments, Tasks, Discussions, Wikis, Site Pages, and Shared Document libraries
- Collects just as an end user would see the site – reducing complexity and ensuring that evidence is 'true to life'
- Connects via HTTP protocol, for a seamless collection with no software installation required
- Fully integrated with SharePoint search to enable automatic collection of responsive materials based on keyword and advanced SharePoint searches
- Collects directly from hosted SharePoint installations (i.e. the cloud)
- Seamlessly integrates with Nuix Enterprise Discovery 3.0 for an intuitive native review of SharePoint collections.

What our customers say

“Using Collector for targeted collections has enabled us to collect from enormous data sources including NAS devices, SharePoint and large data servers that other tools simply can't handle. Collector has provided HSSK with the technology to preserve ESI more efficiently and with less resources, ultimately saving our clients money.”

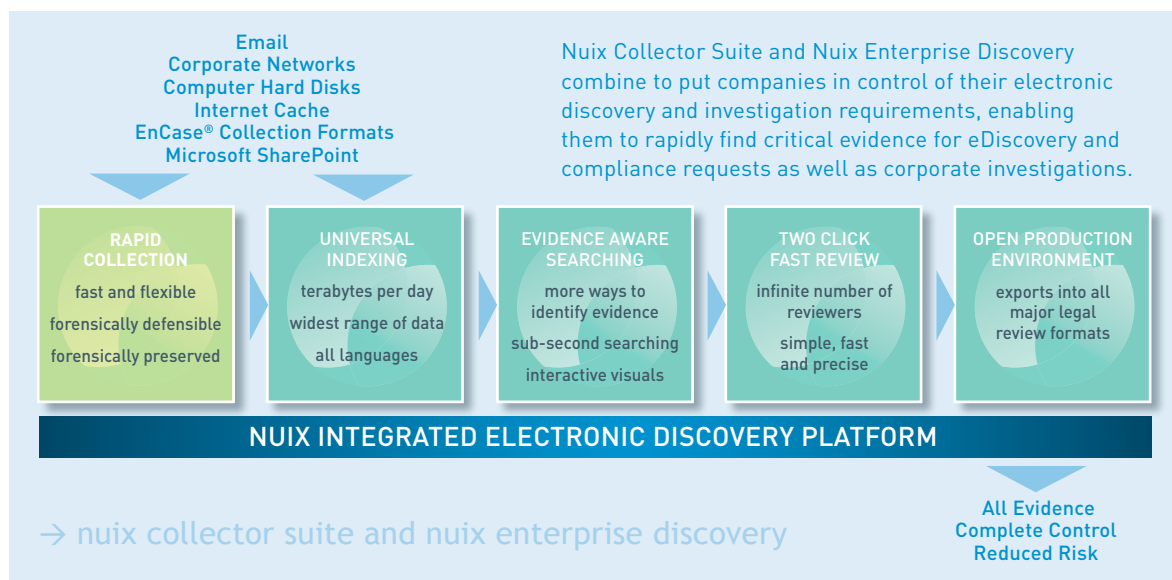

David A Greetham
Managing Director, Computer Forensics
HSSK Group

Simple. Powerful. Precise.
