

Nuix USG

Master your Data

WHAT PROBLEMS DO WE SOLVE?

Nuix enables people to make informed and timely decisions from unstructured, structured, and semi-structured data sources in a way no other technology can.

At the heart of many of the world's most critical issues lies the need to investigate digital information. Herein lies a very big problem: While data volumes at least double every two years, the ability of traditional tools and frameworks to understand and manage information have not kept pace.

This inability to understand the contents of data generates problems for mission-critical activities such as investigating and preventing crime, fraud, professional misconduct, and insider leaks. It turns processes such as regulatory compliance and litigation into costly and draining sagas. And if you can't identify your high-risk and high-value data, you can't protect it from internal and external threats.

Nuix's breakthrough technology platform can reliably ingest, search, and analyze huge data sets at speed and scale

Nuix processes hundreds of file formats and connects directly to the sources where most organizations store their data including file shares, email servers and archives, cloud repositories, mobile devices, forensic imaging formats, and live data from running machines and databases.

Nuix enables people to make informed and timely decisions from unstructured, structured, and semi-structured data sources in a way no other technology can.

ABOUT NUIX USG

Nuix USG was born from Nuix's U.S. Federal and Public Sector practice in 2016. The original goal of the practice was to help the company meet the needs of U.S. Government agencies.

Nuix USG is a wholly owned and operated subsidiary of Nuix North America, Inc. It is a U.S. legal entity supporting educational, local, state, federal, defense, and intelligence agencies and organizations.

OUR VISION

Nuix will be the leading technology for solving complex real-world data challenges including investigation, cybersecurity incident response, insider threats, intelligence, litigation, regulation, privacy, and risk management. We want to transform the way organizations protect and enable their future by:

- Finding answers many times faster than they can using competing technologies
- Solving complex problems with comparative ease
- Getting it right the first time and every time, because the price of getting it wrong is too high.

OUR CUSTOMERS

Nuix USG works with local, state, federal, defense, and intelligence agencies in the United States. In addition, Nuix USG offers eDiscovery, investigations, and information management products and solutions to higher education, regulatory, and law enforcement bodies.

OUR PEOPLE

Nuix solutions combine advanced technology with the extensive knowledge of our unmatched team of industry experts. We have an enviable track record of attracting and retaining world-class developers, subject matter experts, practitioners, trainers, engineers, executives, and business leaders.

Our experts in fields such as digital investigations, information security, information management, endpoint security, digital forensics, and intelligence advise our customers and guide our development of new products.

OUR PRODUCTS AND SOLUTIONS

Using the patented Nuix processing engine, our team of developers and subject matter experts has built a formidable range of software and solutions. Our security and investigation products help organizations gather and apply intelligence; manage threats; investigate wrongdoing; and resolve crises. Our information management products help to manage litigation, audits and regulatory action; unlock value from data; and build and apply governance frameworks.

NUIX USG TO SOLVE

Extract and Process Intelligence

Possible Customers:

- Local, state, and federal agencies
- Government investigators
- Law enforcement bodies
- Intelligence Community agencies
- Higher educational institutions

Investigators today deal with large and ever-growing volumes of digital evidence across an increasing number and variety of sources including phones, laptops, cloud storage, file shares, email servers and archives, and enterprise content repositories.

The Nuix Engine's speed, scale, and forensic precision allow you to quickly find key facts from all relevant data sources at once. For investigators, this makes it possible to bring critical facts to the surface and extract and cross-reference intelligence across vast amounts of evidence. We are also making it easier to match up people, facts, and figures across multiple current and past investigations and between different locations, agencies, and jurisdictions.

CASE STUDY: U.S. Federal Agency

Problem

A large federal agency required fast turnaround for processing, metadata and text extraction for its growing volume of electronic investigation data. Nuix provided the agency with a litigation support database with advanced data analysis capabilities, including optical character recognition software to extract text from unsearchable documents.

Solution

The agency turned to Nuix to answer its data problems.

- Processed a daily load of 250 GB of electronic mail and native files
- Performed metadata and text extraction on electronic storage media, email databases, email attachments, and native files
- Automated processes, reporting and exception handling with scripts, including custom workflows, to ensure consistent and repeatable results.

NUIX USG TO RESOLVE

Manage the Threats

Possible Customers:

- Local, state, and federal agencies
- Government investigators
- Regulatory bodies and advisory firms
- Intelligence Community agencies

For years, cybersecurity incident response teams have used Nuix Investigator for its ability to capture fine forensic detail alongside high-volume data sources.

Now, Nuix Investigation & Response gives an incident responder access to advanced visual analytics and innovative features for cybersecurity incident response and insider threat investigations.

- These advanced features are built on top of bedrock Nuix solutions that capture data from hundreds of devices and locations and allow you to apply advanced investigative techniques to analyze, visualize, and report on the evidence you uncover.
- Consult with world-class experts to develop or refine your policies, procedures, and tactics for tackling the insider threat to your critical value information.

CASE STUDY: U.S. Regulatory Agency

Problem

A well-known U.S. regulatory agency held a large amount of intellectual property and trade secrets for organizations across the country and needed to ensure that this valuable information remained protected from internal, as well as external, threats.

Solution

Nuix counterintelligence experts answered the call by:

- Designing and implementing an insider threat program
- Helping uncover and preventing numerous insider attempts to steal valuable intellectual property

NUIX USG TO DISCOVER

Show and Analyze the Proof

Possible Customers:

- Local, state, and federal agencies
- Government investigators
- Regulatory bodies and advisory firms
- Attorneys General
- Higher educational institutes

The key in any litigation, audit, or regulatory response is getting rapid and reliable access to collected data so you can make informed decisions.

This is where Nuix's processing capabilities are without peer. The Nuix Engine's unmatched speed and scale support rapid data extraction from more formats with the highest level of certainty. This means you can deliver early case assessment and collaborative workflows using powerful, integrated tools that streamline the entire eDiscovery process.

CASE STUDY: U.S. Government Service Provider

Problem

To support a major U.S. Government litigation support contract, this service provider needed to achieve quick turnaround of very large data sets to support the nation's most demanding eDiscovery and litigation requirements.

Solution

Nuix eDiscovery solutions gave the service provider the ability to:

- Process large data sets and produce native and text productions in a quick timeline
- Accomplish 10-12 case productions per month, often with up to 45 custom metadata fields
- Support multiple agencies from a single platform
- Process terabyte-sized cases within two days

NUIX USG TO GOVERN

Build your Framework

Possible Customers:

- Local, state, and federal agencies
- Department of Defense agencies
- Regulatory bodies
- Higher educational institutions
- Organizations holding sensitive or personally identifiable information

Many problems facing organizations—including frequent litigation or regulatory action, growing storage costs, data breaches, and difficulties making fact-based decisions—stem from a lack of proper information governance.

Through our product development and ongoing thought leadership over many years, Nuix has led the charge to help organizations better understand and manage their data.

Nuix information governance solutions enable active governance. The Nuix Engine's thorough and highly efficient indexing of unstructured information gives you deep insights into the threats and opportunities contained in your organization's data. This enables you to make informed governance decisions and act on them.

CASE STUDY: U.S. Federal Agency

Problem

The Chief Information Officer of this U.S. Federal agency's administration office required an archive and migration tool that could decrypt, extract, categorize and migrate hundreds of millions of emails to content servers for compliance with record-keeping regulations. Using Nuix, the CIO extracted over 10TB of compressed and encrypted emails (more than 205 million messages) from its legacy archive system.

Solution

- Processed 500-800k emails an hour
- Analyzed and categorized messages before migrating them
- Retrieved more than 205 million emails in just four months for one-tenth the cost of competing technologies.
