

SIGNS YOUR ORGANIZATION COULD USE A NUIX DATA WAREHOUSE

- Is your organization facing multiple litigations or regulatory requests with overlapping custodians?
- Do you find your organization collecting and processing the same data from the same custodians multiple times?
- Do you feel like you're paying legal teams to review and code the same records over and over?
- Are you worried this repetitive approach could lead to inconsistencies between discovery requests across the same data?
- Would you like to save time and money by leveraging past decisions on privilege, intellectual property, personal information, and others as coding hints for future matters?
- Would you like to be able search, cull, run analytics, and take action across all your electronically stored information (ESI) through a single lens no matter how much data you have?
- Do you want to gain deeper insights and set informed case strategies sooner in your early case assessment and document review processes?
- Would you like to process and host your own data to reduce your litigation technology costs?
- Would your security posture benefit by hosting your own data and granting granular permission for outside counsel and litigation providers to review it in a cloud or physical environment you oversee?
- Do you want to be able to identify data that's sensitive or subject to privacy regulations before it flows into review?
- Would you like to expire data that's no longer responsive to legal hold and other retention requirements?

IMPORTANT FIRST STEPS FOR IMPLEMENTING A NUIX DATA WAREHOUSE

- Involve executives in the decision-making process to ensure stakeholder buy-in.
- Choose one of Nuix's premier partners to help you implement your Nuix data warehouse—you may already work with this partner as your litigation services provider.
- Benchmark your current processes so you can quantify the improvements after you implement the Nuix data warehouse.
- Identify serial custodians within your organization and find where they keep their data.
- Gain an understanding of how much overlapping or serial custodian data is in scope.
- Configure your initial environment.
- Index all your serial custodian data into one case index for full searchability.
- Begin thinking about coding decisions such as privileged, intellectual property, trade secrets, private, and junk that you wish to track and append to the master record in your Nuix data warehouse and leverage as hints next time this record appears in a review.

CONSIDERATIONS WHEN IMPLEMENTING A NUIX DATA WAREHOUSE

ARCHITECTURAL AND SIZING CONSIDERATIONS

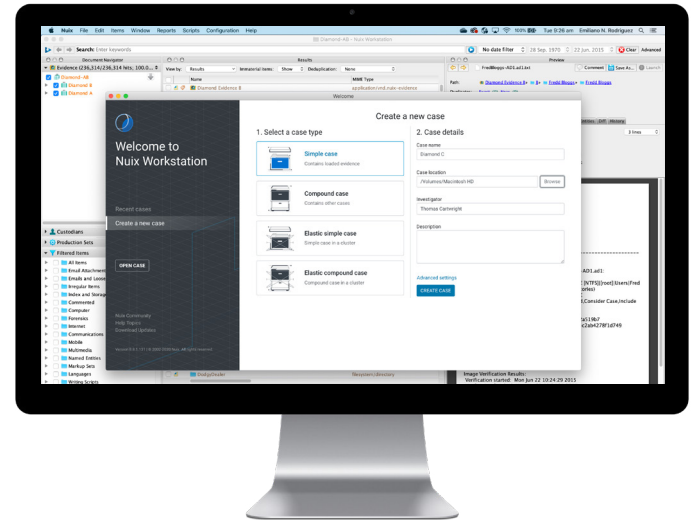

- How many active matters do you have right now?
- How much data is in a typical matter?
- How many custodians are in a typical matter?
- What was your largest matter in the past three years?

DEPLOYMENT LOCATION CONSIDERATIONS

Where are your most common sources of discoverable data (e.g. email, cloud data, file shares, endpoints, etc.)?

Do you want to deploy this:

- In your own physical environment
- In the cloud
- In a mixture of both
- Or with a third-party hosting provider?

The Nuix Engine and Elasticsearch form the foundation of your litigation-ready Nuix data warehouse.

nuix

Nuix (www.nuix.com) creates innovative software that empowers organizations to simply and quickly find the truth from any data in a digital world. We are a passionate and talented team, delighting our customers with software that transforms data into actionable intelligence and helps them overcome the challenges of litigation, investigation, governance, risk, and compliance.
