

Nuix 7.8 delivers simpler workflows for common tasks such as finding communication patterns between people, hunting for personally identifiable information, analyzing mobile devices, and conducting incident response and insider threat investigations. This release gives you super performance in big data scenarios including high-volume optical character recognition (OCR) and working with very large compound cases.

The Nuix 7.8 release includes updates to Nuix Workstation, Nuix Web Review & Analytics, and Nuix Enterprise Collection Center. It improves speed and efficiency within Nuix products and working across the Nuix toolset.

THE NUIX ADVANTAGE

WITH NUIX 7.8 YOU CAN:

- Quickly visualize and navigate communication patterns between people and their connections to evidence items using the new communications data canvas
- Build massive compound cases using Elasticsearch and search across the entire corpus of data in one go
- Automate and streamline the process of sweeping data repositories for personally identifiable information, to help comply with privacy and data protection regulations
- Quickly conduct forensic collections using Nuix Enterprise Collection Center following security or insider threat alerts from Nuix Adaptive Security
- Enjoy improved capabilities for importing mobile device data and forensic images.

Look who's talking, and what they're talking about, with the communications canvas in Nuix Web Review & Analytics.

NUIX WORKSTATION

Custom named entities for capturing personally identifiable information. Using Nuix Data Finder technology, you can automate the capture of personally identifiable information (PII) using our built-in named entities or create your own.

More choices for Elasticsearch. This release allows you to create compound cases in Elasticsearch, combining existing cases into a single repository for cross-case searching and analysis. You can also install Nuix with an embedded Elasticsearch database that you don't need to configure or manage.

Faster, easier optical character recognition. You can increase the speed, hardware utilization, and convenience of optical character recognition (OCR) by running OCR in the background while performing additional tasks and using a different processor core for each page of a document. We've upgraded to the most recent version of ABBYY software for faster, higher quality OCR extraction.

Reintegrate text and PDFs. If you have text or PDF files created from Nuix case items by other software, for example external OCR or translation applications, Nuix Workstation can automatically reincorporate this data into the original items, either replacing the existing content or appending it to each item.

Improved mobile device forensics. This release includes support for MSAB XAMN and XML and version 7.1 of MSAB XRY; deduplication within XRY and Cellebrite forensic reports; and more robust extraction of Android devices using the Nuix Imager.

NUIX ENTERPRISE COLLECTION CENTER

Streamlined incident response. Using Nuix Adaptive Security (www.nuix.com/edr) to identify and triage security issues, security analysts can now perform a forensic full-disk image or selected data collection on the target endpoint with Nuix Enterprise Collection Center, and make that data available for investigators in Nuix Workstation. We've built collection scripts for common tasks such as incident response, insider threat, and compliance investigations.

Collect data selectively based on content. Nuix Enterprise Collection Center can now filter data to collect using keyword lists or regular expressions. You can conduct rapid and targeted data collections for information governance and compliance use cases.

Collect directly to Amazon S3 buckets. Nuix Enterprise Collection Center can collect data directly to Amazon S3 cloud storage rather than to a local disk. This is useful for situations such as remote or on-site collections where local storage is limited.

NUIX WEB REVIEW & ANALYTICS

Communications data canvas. Send communications data—including emails, documents, texts, and chat messages—to the canvas interface to see who is talking to whom and what about. Narrow your scope with keyword searches or by focusing on the people who communicate most often; and view the contents of attachments to build a layer of intelligence into the case.

Improved thread and family item navigation. We've improved the interface for reviewing families of items such as email threads and conversations so you won't get lost while navigating.
