NUIX WORKSTATION 9.2

- **Passware Kit Forensic Integration.** Load encrypted evidence directly into Nuix Workstation, along with the appropriate keys, and decrypt evidence using an existing Passware Kit Forensic license in a streamlined, integrated workflow
- **Chat bubble visualization.** Communication-based items promoted from Nuix Workstation to Nuix Discover® display chat bubble visualizations in Nuix Discover. This gives reviewers a more intuitive chat review experience
- **Move to Elastic REST.** Take advantage of version-agnostic performance and security enhancements as Elastic releases them. The move to Elastic REST decouples the product from a specific version of Elastic to give customers greater access to Elastic updates.

NUIX INVESTIGATE 9.2

- **Tabbed search results.** Open search results in new Nuix Investigate browser tabs to follow multiple lines of inquiry. Pivot from your initial investigation without losing your place in your initial search
- **Chat viewer timeline.** Chat viewer now includes a chat timeline, along with the ability to filter by sender and receiver and the option to initiate a new line of inquiry search from attachments and keywords. Including the ability to specify or preserve specific views, this functionality applies to Breakout and Case summary analytics, saved searches and custom search filters.

NUIX ENTERPRISE COLLECTION CENTER 9.2 AND NUIX COLLECTOR SUITE 9.2

- **Integration with federated authentication.** Ensure the best possible security experience for conducting forensic collections at an enterprise scale using Nuix Enterprise Collection Center
- **Audit trail logging.** Ensure compliance with robust audit trail logs and gain greater insight into collection activities.

NUIX SDK 9.2

- **Enhanced GitHub! site.** Access the latest Nuix SDK developer documentation, including Nuix-created scripts, tutorials and how-to guides to power your development efforts.
